

Use more precision, and less effort !

You can work effortlessly by placing an instrument so that precision, not strength or exertion, controls each instrumentation stroke.

Less effort means less fatigue and less chance of repetitive strain injury.

Self-assessment techniques included in the video help you to critique your own skills.

Save your hands and body

Let the instruments do the work!

A note to the students:

Practice by yourself along with this DVD.

The slow, methodical demonstrations give you adequate time to “see and do”.

Learn the importance of precision from the beginning of skill development and you will not be fatigued in clinic or in private practice.

Revamp your
instrumentation
style.....

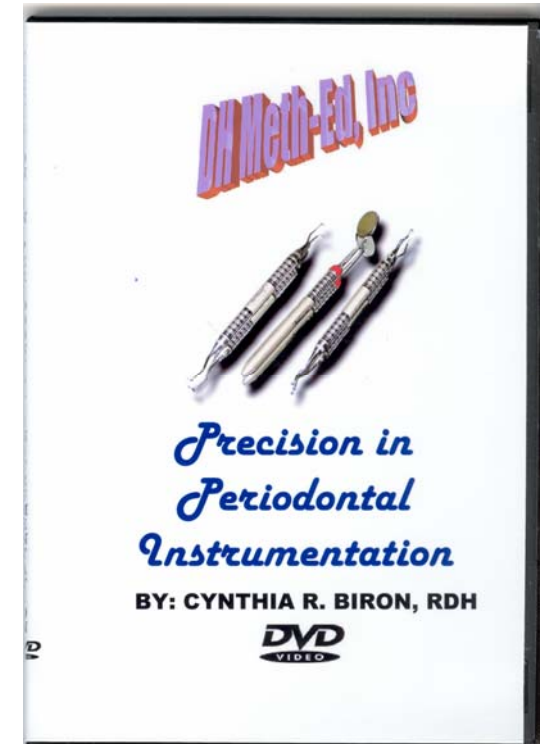

Learn to perform the
techniques taught in the
“Summer Camps”!

dental hygiene educators**

**The Instructional DVD
you have been waiting
for is here:**

An instructional video for
students, educators and
practicing clinicians

“Precision in Periodontal Instrumentation

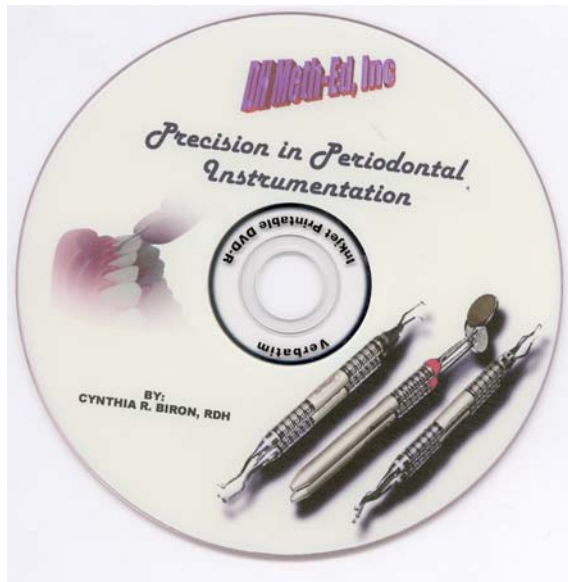

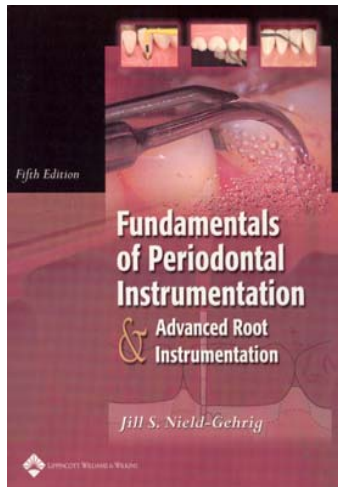

represents a break through in self-instructional materials for dental hygiene students. The DVD format allows students to easily locate and view a topic either on a television or computer screen. Information on the fundamental skills of periodontal instrumentation is presented in a clear and engaging manner.

I would encourage every dental hygiene program to include this DVD on the student booklist. Use of this excellent self-instructional DVD should not be limited to the classroom. Rather, each student should have his or her own copy.

In addition to its use as a vital student-learning tool, ***Precision in Periodontal Instrumentation*** should be mandatory viewing for all faculty members.”

Jill S. Nield-Gehrig, RDH, MA

***Author, Fundamentals of
Periodontal Instrumentation and
Advanced Root Instrumentation***

**Includes a “Menu” for easy access
to the following demonstrations:**

Positioning

Grasp

Fulcrum

Probing Techniques

Exploring Techniques

Elements of Stroke Definition:

Parallelism

Adaptation

Angulation

Activation
